

Summary

Full-stack software engineer with over 10 years of experience designing and shipping distributed systems, RESTful APIs, and cloud-native infrastructure across financial and enterprise SaaS applications. Equally comfortable deep in backend services (Java, .NET Core, Golang) and frontend applications (React, Redux, Javascript, Typescript), with hands-on expertise in DevOps tooling - CI/CD pipelines, Kubernetes, Terraform, and AWS. Proven ability to lead modernization efforts, integrate complex third-party platforms, and build resilient systems in regulated environments (SOC 2, DORA)

Experience

M2 Systems Corporation

Senior Software Developer | 03/2024 - 03/2026

- Developed issuer-side integration in Golang for Mastercard's Digital Enablement Service (MDES) that enabled card tokenization for wallet providers, including Apple Pay and Google Wallet, for partner banks in the EU
- Contributed to APIs using protocol buffers resource representation over gRPC to support payment processing and authorization services for EU financial institutions
- Created ancillary services such as a webhook notification producer for transaction and status change events, as well as a fraud detection service during the card digitization process
- Led efforts to modernize long-standing applications that improved performance, maintainability, and developer experience, including upgrading Java services from version 7 to 11 and transitioning the build process from javac compilation to Gradle, streamlining dependency management during the build process
- Architected and led the rewrite of a legacy platform application from Java to Go with a PostgreSQL persistence layer, and introduced an automated CI pipeline using GitHub Actions to build, test, and containerize the application on each push to specific branches throughout various repositories

Conga

Senior Software Engineer | 05/2021 - 02/2024

- Worked with product management and architects to design and build RESTful APIs for e-signature application comprised of multiple orchestrated microservices built in .NET Core
- Implemented event-driven architecture using AWS SQS/SNS
- Developed React application that used in-house component library, interacting with e-signature APIs and utilized Redux for global state management
- Responsible for planning, building, and deploying monthly releases using GitHub Actions + Jenkins (CI) and Spinnaker pipelines (CD)
- Modularized Terraform components, breaking down monolithic infrastructure components into more manageable pieces

Software Engineer | 06/2018 - 05/2021

- Contributed to the full stack development of e-signature application with native integration to Salesforce that included custom Apex classes, SLDS to build custom Lightning Web Components, APIs built in Java, React frontend, and PostgreSQL persistence layer.
- Contributed to the migration of production infrastructure from AWS Elastic Beanstalk to Kubernetes in an effort to make e-signature application more scalable
- Helped maintain SOC 2 Type II compliance by planning and executing annual disaster recovery exercises that restored the application in a failover region within one hour of a simulated outage
- Used Agile methodology to plan, refine and track work during a 2-week sprint cycle

Senior Technical Consultant | 05/2016 - 06/2018

- Worked individually with clients to scope, build and deliver custom integration middleware between contract management application and other various applications such as Workday, Salesforce, and MS Dynamics
- Maintained over 50 continuously running, business critical integrations adhering to the OSGI standard using Apache ServiceMix/Karaf

Novatus Inc.

Technical Services Developer | 03/2015 - 05/2016

- Designed and implemented a reusable data migration service that utilized Hibernate to streamline and automate the mapping and creation of extensive contract metadata in a PostgreSQL application database for new and existing clients
- Leveraged JasperReports to fulfill customer requests that delivered regularly scheduled custom reports out of PostgreSQL and MSSQL databases
- Led successful migration initiatives that converted data from an MSSQL database to PostgreSQL by implementing robust ETL processes, addressing schema differences and optimizing performance in the target application environment

Technical Support | 03/2014 - 03/2015

- Proven track record of troubleshooting and resolving complex issues with contract lifecycle management application
- Worked with engineers to identify bugs and test new features before releases
- Created and maintained client-side unit testing utilizing Siesta Test Framework and Selenium

Sanders Company

Field Service Technician Apprentice | 01/2006 - 02/2007

- Maintained programmable logic controllers for wastewater lift stations, ensuring reliable automation and control. Conducted routine inspections, diagnosed issues, and implemented preventive measures for efficient wastewater pumping to water treatment facilities
- Installation of infrastructure for lift stations that enabled communications to water treatment facilities

Education

Palm Beach State College | West Palm Beach, FL

Associate of Science - Undergraduate Classes - Political Science
